

WHY HTG?

HTG is the name to trust for a proper design, installation, and programming of all your Hi-Tech home systems. We are a family owned & run telecommunications infrastructure design & integration firm with experience in the health care market.

As you work with us to best determine your lifestyle and homes needs, we believe you will find our 35 years of practical on the job design and installation experience in commercial electrical, communications, and building control & automation systems as one of the key characteristics that differentiates us. Our employees maintain continuing education and are authorized by the manufacturers of all the systems we design and install. Some hold highly acclaimed International BICSI design and project management credentials.

HTG is your single point of contact and knowledge resource from concept design to completion. We can produce drawings and documents that are necessary for an architect or builder. At the completion of an installation, your system is warranted ; so you may rest assured that your investment is protected. At HTG, we want you to be happy with an asset that is easy to use and reliable for many years to come.

TECHNOLOGY, ASSISTED CARE, FAMILY COMMUNICATION AND THE HI-TECH INDEPENDENT LIVING CARE TRIANGLE THEY CREATE.

HOME HEALTH TECHNOLOGY

When caring meets technology, you will never be home alone again.

HARPER TECHNOLOGY GROUP

Care recipients: If you had the ability to remain independent & engaged in the daily life of precious relatives while also transmitting your statistical wellness to those who want you around from your own home, would you be happy?

Family's and caregivers: If you could remain connected and participate more in maintaining the well being of a loved one, regardless of their location, from anywhere, anytime, would you be happy?

If you answered yes, welcome to the Hi-Tech generation of care giving!

HTG is heartened to introduce Grand Care Systems. Since 1993, GC has been keeping families and help in touch reliably.

HTG and GC promote the most comprehensive and feature packed system available today; combining aspects of home automation, real time statistical data of living activities, medically reliable wellness reporting, and electronic care notes in a single system.

At HTG, we believe this non invasive approach to aging in place and home care will drastically lower worry levels, improve care giving, and the way family and professionals remain efficiently connected in today's busy world & independent living lifestyles.

WHY, WHO, WHAT & ABOUT

◇ Care recipients welcome technology because of rehab, age, disability or just the notion a home can do more to provide daily comfort & convenience.

◇ **Caregiver technology not only addresses safety but also the loneliness and social isolation often involved with living alone.**

◇ Caregiver technology can be installed in most homes or assisted living facilities in less than a day.

◇ **Technology is a great "Best bang for your buck", home investment a homeowner can make.**

◇ Any GC system can be made portable or removed without damage to a home should a person travel or move.

◇ **Independent living can also benefit from a home automation system. These systems enhance home control of any powered device, lights, heating, and security into a single touch control for the resident.**

◇ You don't need to be that senior to enjoy the peace of mind security, communication and wellness aspects of this technology. Smart boomers are investing wisely to learn not only how to take control of their own long term wellness. But also adding to the value of their home and promoting a longer, healthier and more active & independent life. The value of the medical data gathered by a GC system is priceless.

SYSTEM PARTS AND SMARTS

◇ Caregiver technology consists of a central unit (very similar to a DVR box), that connects to the Internet , TV and/or touch screen (similar to a bank ATM machine).
 ◇ Because these systems are designed for the active senior generation specifically, **the need to possess computer skills or knowledge is eliminated.** It's just simple and easy!

MONITORING

◇ Small sensors (motion, bed, temp, door, blood pressure, glucose, caller ID, scale, oximeter, etc.) collect information and assure all is well to those concerned.
 ◇ Family members and caregivers can access this data securely anytime, by way of any internet enabled device, (PC, Cell phone, iPod Touch).
 ◇ Automatic alerts are generated if something is out of the ordinary. E.g. wandering, medication missed etc.

COGNITION

◇ Users can participate in brain exercises, read headline news, weather , etc.
 ◇ Users can be reminded by calls, chimes, or light flashes when it's time for medication or to perform specific exercise.

SOME OF THE BENEFITS FOR CAREGIVERS

- ◇ Create a “real time” care triangle among independent seniors, their families, and your staff.
- ◇ Earn community respect for reaching out to independent seniors.
- ◇ Get real time assessment data that can help with family care decisions.
- ◇ Provide a smoother continuum of care from private homes to independent to assisted living.
- ◇ Build awareness of your business practice with an electronic assistant.
- ◇ Monitor several clients at once.
- ◇ Share peace of mind with the family.
- ◇ Coordinate employee schedules.

SOME OF THE BENEFITS FOR THE FAMILY

- ◇ Save money and/or the sell off of family assets by *delaying or avoiding supervised 24/7 live in care.*
- ◇ Keep your loved one connected to their family and caregiver by sending pictures, messages, videos, events, etc.
- ◇ Make better decisions on the level of care with real time data.
- ◇ Protect loved ones from phone scams targeting seniors.
- ◇ Reduce stress and sleep better by knowing loved ones are safe, secure, and living happy independently.
- ◇ Receive wellness & activity reports!

If you are interested, complete and return this form and you will be entered into HTG's home automation drawing to win a: **“Safe entry lighting control package”.** Winners will never come home to a dark home again

Did you enjoy this brochure?
 Yes No Somewhat

Would you now consider caregiver technology or perhaps home automation if your were renovating or building your home?
 Yes No Some Smarts

Are you or do you know someone who is concerned or involved with the daily care of an elderly person ?
 Yes No

Would you or someone you know be interested in 1. attending a free local seminar, 2. online live demonstration, or 3. in home demonstration of caregiver technology?
 Yes No If Yes please indicate : _____

Would you like to be contacted by HTG about questions and needs you may have or in regards to “Parts and Smarts” available for your care giver or home automation system?
 Yes No

Did you know?
 ◇ \$3,008.00 is the AVERAGE amount spent on assisted living, each month, nationwide.
 ◇ **Using this statistic, an installed caregiver technology system can provide a return on investment in as little as 2-4 months!**
 ◇ Reports from families say the peace of mind, comfort, and happiness is priceless!
